7. THE RELATIONSHIP OF THE ARTERIES OF THE MIDDLE AND INTERNAL EAR AND THEIR CLINICAL SIGNIFICANCE. O vztazích mezi arteriemi středního a vnitřního ucha a jejich klinickém významu. Jankov G. Sofia.
ČSL. OTOLARYNG. 1957, 6/1 (5-18) Illus. 6

Anastomoses do not exist between the arteries of the middle ear and those of the membranous labyrinth or the endosteal layers of the bony labyrinth. The endochondrial and periosteal layer of the bony labyrinth are supplied by vessels of the middle ear. In acute infections of the middle ear, infection may spread to the internal ear through apertures of the first part of the membrane, without breakdown. In chronic infections, the latter may penetrate the bony labyrinth through destruction of bone. Infection is thus not transmitted by the vascular route. The anastomoses found in large number by some authors between the arteries of the middle and internal ear are remnants of embryonal passages. Only in such cases is it possible for inflammatory processes of the middle ear to spread to the internal ear by way of vessels. (XI, 1*)

YANKOV,

AUTHOR: Yankov, Stoyko Petrov, Bulgaria. 75-6-20/23

TITLE: Qualitative Determination of the CN⁻-Ions (Kachestvennoye opredeleniye iona CN⁻).

PERIODICAL: Zhurnal Analiticheskoy Khimii, 1957, Vol. 12, Nr 6,
pp. 759-759 (USSR)

ABSTRACT: Applying the method of adsorption on Al₂O₃, the content of CN⁻-ions with copper-acetate and benzidine is determined by the development of blue coloration. Since the ions disturbed chlorine, bromine, iodine and rhodanite, it is advisable to carry out the experiments in 95% ethyl alcohol. The sensitivity of the method amounts to 0,15 μCN⁻.

Title : New Problems in Dyeing of Cotton with Developed (Ice
Color) Dyes.
Orig Pub : Ind. textila, 1957, 8, No 4, 167-174

Abstract : Increased fastness to rubbing of ice-color azo-dyes is
attained by: good pretreatment of fibers or fabric to
ensure their high capillarity; use of soft water in
preparation of naphthol solutions; reducing the amount
of alkali used to dissolve the naphthols; using dis-
persing agents in the treatment with naphthols and in
coupling; using an intermediate treatment of the naph-
tholated material with alkaline solution of salt,
